50X1-HUM

- Between the villages of Vranin and Domamil (050/878) in the Moravske Budejovice District, on a hill 547 meters high, a large secret project is under construction.
- The purpose of the construction is unknown to the local population. Large underground chambers are being built. All data are kept in the strictest secrecy. however, 80 carloads of cement were used, which suggests that the underground chambers are very large and solid. Several machines have been installed in these chambers, but no information is available about their type or use. Laborers who were previously engaged in digging foundations and in pouring concrete are now forbidden to enter the underground part of the project. Only electricians from Havlickuv Brod, who commute every day by bus to this site, have access to the underground chambers.
- this project would be used by the army as a radar station in war and as a television station in peacetime.
